This 35,000 SF Design-Assist project on a ten-acre site consists of a Sanctuary, Multi-Purpose Room, Administration Offices, and school.

The Sanctuary roof is structural steel beams and open web steel joists with metal decking, the walls are 12" masonry block, and the remainder of the building is wood-framed. The Multi-Purpose Room is used for both worship services and a dining hall. Two 80' long operable wall systems can divide the Multi-Purpose Room into three separate rooms.
